

## Don't Keep Them In The Dark!

Bait fish kept in total darkness in your bait tank can not see the walls of the tank or other fish in the tank. This small light will offer enough illumination to prevent the fish from crashing into the walls and other fish at night, which is a major cause of scale loss and injury.

Marine biologists also state that "a small light at night will sooth the fish and make them less spooky". This is why large scale marine aquariums do not turn off all the lights at night.

*To reduce corrosion to your light*

After your light is installed coat the entire metal plate, screws and terminals with liquid tape or marine silicone, *This really is important*

## AC-10 BAIT-LITE

SPLICE WIRES TO LIGHT'S PIC TAILS WITH WATERPROOF BUTT CONNECTORS, AND CONNECT THEM TO A 12 VOLT POWER SOURCE. BAIT-LITE IS WATERPROOF, BUT NEVER IMMERSE PLUG OR WIRES IN WATER!

PLACE LIGHT FACE DOWN, ON TOP OF "SUPERBAG" COVER OR "BAIT-BUOY" COVER. RUN RELEASABLE CABLE TIE DOWN THROUGH MESH, UP THROUGH THE OTHER SIDE OF LIGHT, AND FASTEN. TO RELEASE, DEFLECT TAB AND PULL OUT TIE.

FOR USE ON "ULTRATANK", INSERT LIGHT INTO ROUND CAVITY OF TANK.

FOR "SUPERTANK", PULL OUT THE CABLE TIE, TURN IT OVER, AND REINSERT IN THE LIGHT. ATTACH TO TOP OF TANK HANDLE SO THAT LIGHT SHINES THROUGH TRANSLUCENT TANK.

## AC-8 AQUA-SCOOP

**NOW MOLDED OF SUPER TOUGH XENOY. 1 YEAR GUARANTEE AGAINST BREAKAGE!**

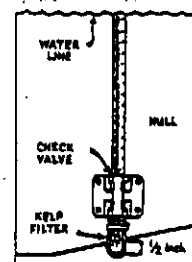

SCOOPS UP WATER WHILE UNDERWAY, OR AT REST, AND SUPPLIES IT TO BAIT TANK PUMP.

NO HOLE IN BOTTOM OF BOAT OR THRU-HULL INSTALLATION REQUIRED.

TUBE SNAPS OUT OF BRACKET IF HIT BY A SUBMERGED OBJECT OR WHEN NOT USING.

CHECK VALVE PREVENTS BACK FLOW AND HOLDS PRIME ON THE PUMP.

### INSTRUCTIONS:

Mount AQUA-SCOOP as shown, extending it 1/2" below the bottom of boat, and as deep and close to the center of transom as possible without getting into possible turbulence. Use 5/8" I.D. hose.
